PRIVATE INFORMATION MEMORANDUM

# THE HONEYPOT SCHEME

Public persona, social-media ambiguity and controlled contact pathways

| DOCUMENT FIELD | RECORDED DETAIL |
|---|---|
| **ISSUED DATE** | 2 November 2026 |
| **EXECUTED START MONTH** | March- |
| ANALYSIS SUPPLEMENT | 3 November 2026 |
| INTENDED READERS | Selected loved ones |
| **SUBJECT** | Interpretation of public social-media activity |

## I. PURPOSE AND SCOPE

This memorandum is intended for selected loved ones, including family members, partners and close friends. It describes the reported arrangement across applicable social-media platforms, including Instagram and TikTok, while explaining why some visible activity can be intentionally ambiguous, atypical or inconsistent with ordinary private behaviour. It does not reproduce investigative records, identify alleged subjects or disclose operational particulars.

The central point for loved ones is that public posts, follows and edited videos can create impressions beyond what those items establish. This memorandum provides context for interpreting those appearances without drawing conclusions about other account holders. Any genuine concern should be raised privately and considered on its own facts.

## II. PRIMARY INTERPRETIVE PRINCIPLE

**A public-facing impression is not proof of the private conduct it appears to suggest.**

A visible follow, a suggestive edit or an apparent travel location should not automatically be treated as an admission, a relationship or a reliable current-location disclosure.

Prepared for a limited personal audience.

PART 01 / EXPLANATORY MEMORANDUM

# Executive explanation

Purpose, scope and reasonable limits of interpretation

### What the reader should understand

This memorandum outlines a reported case-specific public-persona arrangement involving the account holder and the responsible organisation. Certain public-facing actions within the arrangement can create impressions different from their underlying circumstances. Loved ones should therefore avoid treating every visible social-media signal as a literal account of private behaviour. Questions about personal wellbeing remain appropriate.

The reported approach combines distinctive public-persona cues, visible account relationships, ambiguous short-form content and location impressions. The described scope includes Instagram and TikTok, together with other applicable platforms within the remit of the responsible parties. The proposed contact pathway concerns voluntary actions involving designated accounts, which are flagged under the described procedure and assessed separately. Part 03 explains the conceptual process. Part 07 examines the actual Instagram account records supplied for this memorandum; those records are not TikTok data.

### Three categories that must remain separate

1. Observed activity: an account followed another account; a particular video was posted; a photograph appeared online.
2. Interpretation: a viewer believes the content implies smoking, a romantic interest, substance use, or physical presence abroad.
3. Verified fact: independently established conduct, identity, location or investigative finding supported by retained evidence.

Neither a suggestive edit nor a profile connection automatically moves an interpretation into the verified-fact category. The same applies to apparent clues in ordinary comments, GIFs and public reactions.

### Why a limited explanation for loved ones is appropriate

Original investigative records may contain source material, working hypotheses, identifiers, methods, disclosure restrictions or information concerning uninvolved people. This memorandum limits disclosure to the context loved ones need when interpreting public behaviour. Any evidentiary finding should be based on the original material and an appropriately authorised assessment.

No statement in this memorandum should be used as an accusation against a specific person.

PART 02 / EXPLANATORY MEMORANDUM

# The public-persona arrangement

A distinction between staged social signals and established personality

### Relationship to the “Personality Public Scheme”

A separate reference titled the “Personality Public Scheme” sets out the intended characteristics of the public persona. The arrangement addressed in this memorandum is intended to complement that reference rather than replace it.

One phrase reportedly used in the underlying description is “addict-like personality”. In this memorandum, that phrase is treated as an informal description of a compulsive-looking or fixation-heavy public presentation. It is not a clinical diagnosis, an assertion of dependency, or proof of substance use.

### Why ambiguity can be persuasive

A persona can appear coherent when short videos, follows, captions and photographs seem to support the same impression. Viewers may infer intent or conduct from repeated patterns, even where the individual items do not verify that inference. This effect is especially relevant when viewers already have expectations about the person whose profile they are viewing.

INTERPRETIVE RISKS

- Reputational spillover: loved ones and casual viewers may form durable beliefs from suggestive content.
- Context collapse: material intended for one audience may circulate to people who lack the necessary explanation.
- Escalating misinterpretation: repetition can make an unsupported inference feel increasingly certain.
- Evidence confusion: presentation choices can be mistaken for direct proof of events or relationships.

### How loved ones can respond

Loved ones may ask about personal wellbeing and raise specific concerns privately and respectfully. They should avoid treating unusual online impressions as established facts. Equally, genuine concerns should not be dismissed solely because some public activity may have an alternative explanation. Concerns involving safety or wellbeing should be considered on their own merits, with appropriate assistance sought where necessary.

PART 03 / CONCEPTUAL PROCESS MODELS

## Purpose and process

The rationale for a proposed contact pathway, explained in two figures

### Why the arrangement may be considered

Ordinary follows, comments and publicly visible profiles can be interpreted in several ways. The stated purpose is to distinguish passive viewing from actions independently chosen by a third party. Under the process described, **EVERY ACTION OR INTERACTION INVOLVING A DESIGNATED ACCOUNT IS FLAGGED FOR REVIEW.** Flagging directs an observed event into the described review process. Any further assessment or response is determined separately by responsible personnel.

Loved ones must not follow, contact, message, test or provoke third-party accounts appearing on applicable social-media profiles for the purpose of checking this arrangement. **UNAUTHORISED ENGAGEMENT OR INTERFERENCE CAN HAVE LEGAL CONSEQUENCES, DEPENDING ON THE CONDUCT AND APPLICABLE LAW.** Such activity can disrupt the review process and draw uninvolved people into scrutiny. Questions about personal wellbeing should instead be raised privately with the account holder.

FIGURE 1. SIMPLIFIED CONCEPTUAL MODEL

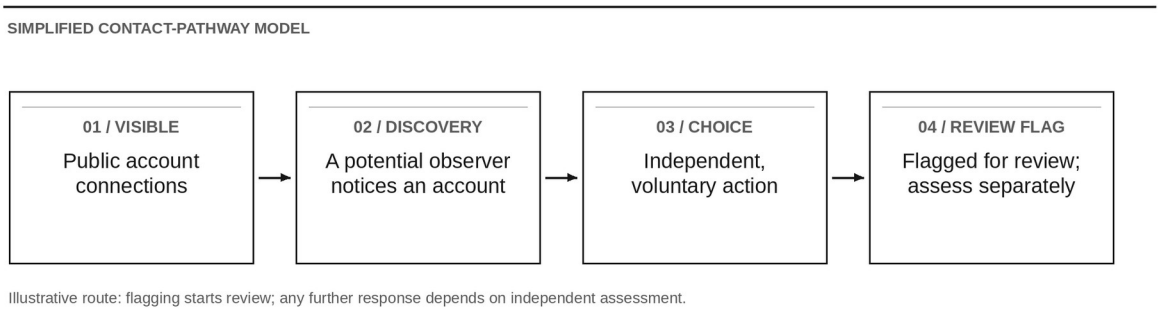

Figure 1. Conceptual sequence: a voluntary action involving a designated account is flagged for independent review.

FIGURE 2. EXPANDED CONCEPTUAL DECISION MODEL

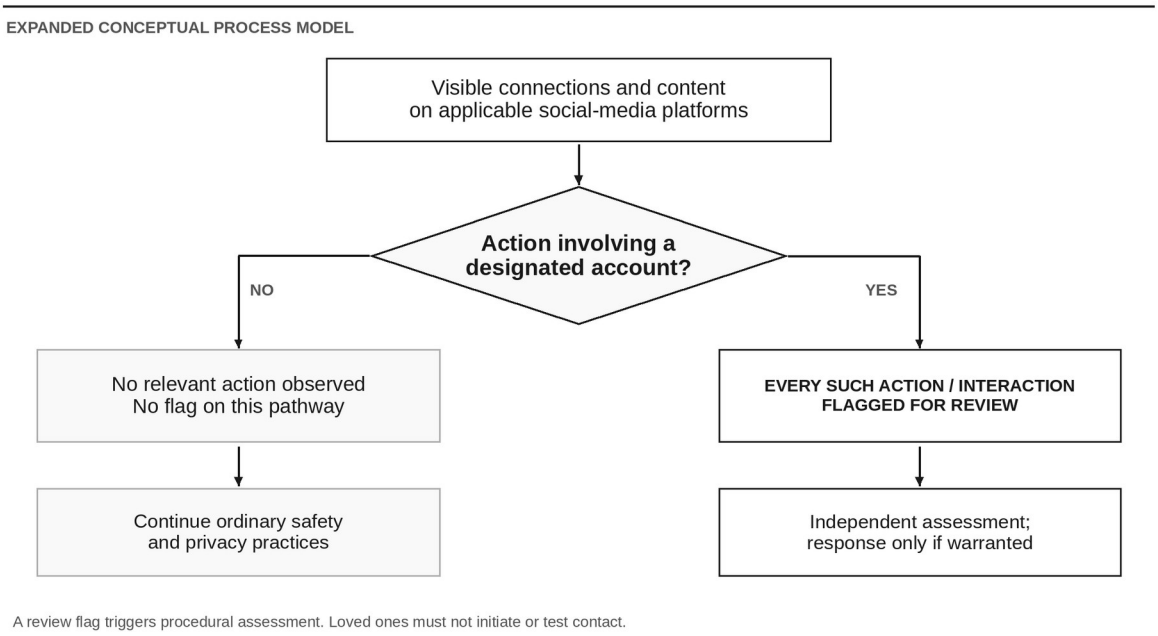

Figure 2. An expanded decision model separating the flagging of an action from any subsequent assessment or response.

PART 04 / EXPLANATORY MEMORANDUM

## The contact-pathway concept

What a potential honeypot pathway does, and does not, mean

### Visible account connections across platforms

As described, visible public account relationships allow certain connections to be discovered. Under the stated procedure, every action or interaction involving a designated account is flagged for review. Public visibility alone is not an observed contact event.

### Flagging is required; conclusions remain conditional

1. A third-party account is visible through public social-media connections, including follower or following lists where available.
2. A third party independently chooses whether to follow, message, comment or otherwise act in relation to a designated account.
3. Under the described procedure, every such action or interaction is flagged for review. Responsible personnel separately assess its relevance where lawful and authorised.
4. Any conclusion about identity, intent or linkage must rest on corroborated material, not on the interaction alone.

The account may therefore be a potential contact pathway, not itself the trap; the investigative value, if any, depends on what actually happens and how it is independently assessed. The conceptual models on the preceding page show this distinction in outline.

### What the available context does not determine

- That an individual account's internal procedural status can be determined from a public profile or follower list.
- That every person who follows, likes, comments or sends a message has a demonstrated connection to an investigative matter.
- That feminine-coded usernames identify women, a criminal network or consenting participants.
- That a public follower list can disclose private platform telemetry such as device fingerprints or IP addresses.

### A non-negotiable boundary for loved ones

Loved ones must not contact, test, provoke, follow, impersonate or investigate any account named, listed or suggested in this memorandum. This instruction applies to every listed account without requiring loved ones to determine its role. Even a well-intended attempt to verify the arrangement can interfere with the described review process.

PART 05 / EXPLANATORY MEMORANDUM

## Public-content examples

How convincing appearances can be formed without proving underlying conduct

### Example A / Ambiguous short-form video

A clip may show a flame, a brief movement and an abrupt cut. If the full act is not visible, the edit may invite an inference of smoking without establishing that smoking occurred. A viewer may nonetheless remember the implication as though it were direct evidence.

Interpretation rule: the video documents the images actually shown. It does not, by itself, establish the missing action, the substance involved or the person's habits.

### Example B / Following relationships

A profile may appear to follow several accounts whose usernames include feminine-coded names. Viewers might interpret those links as evidence of personal relationships or romantic interest. The usernames alone do not establish the account holders' genders, and the follows do not demonstrate a personal relationship or any designated investigative role.

Interpretation rule: visible usernames and follows can shape public impressions, but a profile connection alone does not establish an offline relationship.

### Example C / Apparent presence abroad

Images or video genuinely recorded in another country can be posted at a later date or in a different context. That can create a convincing impression of current travel without establishing the posting person's present location. A photograph's setting and its publication time are not interchangeable.

Interpretation rule: do not publicly correct, confirm or guess the account holder's real-time location. Raise genuine welfare or safety concerns privately.

### The underlying problem for loved ones

People who know the account holder well may feel the strongest emotional conflict: they recognise the person, but the public signals seem inconsistent with what they know. The existence of ambiguity is a reason for caution and conversation, not automatic distrust.

PART 06 / EXPLANATORY MEMORANDUM

## Account pathways and proposal register

Organisation-proposed account pathways; no independent action by loved ones

The use of account pathways as an investigative measure was proposed by the responsible organisation, not by the account holder. Decisions concerning account designation, the assessment of interactions and any subsequent response remain with responsible personnel. The register below is reserved for entries supplied through the relevant review process. Loved ones must not contact, follow, test or investigate accounts identified in this memorandum.

ACCOUNT PATHWAY REGISTER / AUTHORISED ENTRIES ONLY

| Item | Suggested account | Recorded basis | Register status |
|---|---|---|---|
| 01 | [Add only from direct, authorised instruction] | [Reference or date] | Pending entry |
| 02 | [Add only from direct, authorised instruction] | [Reference or date] | Pending entry |
| 03 | [Add only from direct, authorised instruction] | [Reference or date] | Pending entry |
| 04 | [Add only from direct, authorised instruction] | [Reference or date] | Pending entry |

### Criteria for responsible interpretation

- Suggested accounts are handled through the described review procedure; loved ones must not test or approach them.
- Any claimed connection must be corroborated independently; follower counts and username patterns are insufficient.
- Under the described procedure, an action involving a designated account is flagged for review; subsequent handling remains with responsible personnel.
- Disclosing a specific account to loved ones may expose uninvolved people or compromise confidentiality.

The proposal register remains blank until candidate details are supplied for authorised inclusion. The Instagram exports are used in the separate statistical and account-reference sections and do not populate this register.

PART 07 / EXPLANATORY MEMORANDUM

## Instagram-specific account analysis

Documented Instagram extracts within a broader social-media scope

The Instagram account figures below come from records dated 3 November 2026 and supplement the memorandum issued on 2 November 2026. TikTok is also within the reported arrangement, but the numerical analysis here concerns Instagram specifically.

**INSTAGRAM PROFILE DISPLAY (REPORTED 3 NOVEMBER 2026):** 2,129 followers | 132 following. These reported public totals are distinct from the smaller preliminary exports analysed below.

INITIAL WORKING EXPORTS / DISTINCT FROM PROFILE TOTALS

| Working export | Total | Feminine-coded | Masculine-coded | No reliable clue |
|---|---|---|---|---|
| Follower handles | 1,268 | 218 (17.19%) | 53 (4.18%) | 997 (78.63%) |
| Following handles | 124 | 13 (10.48%) | 21 (16.94%) | 90 (72.58%) |

These records form an initial working extract, distinct from the public-profile totals. The 753-account follower file is contained within the 1,268-account file, so the two are not added together. Of 124 captured following handles, 62 also appear in the larger follower extract.

INSTAGRAM EXTRACT / REFERENCE HANDLES

The handles below are recorded in the preliminary Instagram following extract. They illustrate the public account environment relevant to the described measures. For loved ones, the practical rule is straightforward: do not contact, follow, message, test or investigate any of these accounts. Account-pathway decisions remain with responsible personnel.

| ACCOUNT HANDLE / EXAMPLE A | ACCOUNT HANDLE / EXAMPLE B |
|---|---|
| `_sophie__wood_` | `anikajacobsen` |
| `ella__mckinney` | `gemma.crouse` |
| `globalworkandtravel` | `jacksch1pper_` |
| `lily.archivess` | `palaceskateboards` |

### How name patterns can shape impressions

Among 271 follower handles with recognisable name cues, 218 (80.44%) were classified as feminine-coded; among 34 coded following handles, 13 (38.24%) were feminine-coded. The account holder separately reports that many concerning approaches have appeared under similarly feminine-coded usernames. This context helps explain why the visible naming pattern is relevant to the concerns discussed here.

### Reader’s takeaway

These figures describe username cues within the initial Instagram extracts and explain how visible account names can contribute to public impressions.

- The account examples are included for context. Any assessment of account pathways is a matter for the responsible review process, not an independent inquiry by loved ones.

Sources: Instagram account exports and name-pattern analysis, 3 November 2026; reported Instagram profile totals, 3 November 2026. These figures do not describe TikTok or other platforms.

## Guidance for loved ones

Support, boundaries, uncertainty and onward disclosure

### How to read applicable social-media profiles responsibly

1. Do not treat suggestive videos, follows, captions or apparent travel locations as conclusive descriptions of private life.
2. If an item causes genuine concern, raise it directly and privately with the person, without public accusations or sharing screenshots further.
3. Do not contact, message, test, provoke or attempt to identify third-party accounts to check or investigate this arrangement. Unauthorised engagement or interference can have legal consequences, depending on the conduct and applicable law.
4. Avoid publishing real-time locations, routines or identifying details about the person or those close to them.
5. Do not suppress a real safety concern merely because some public content may be ambiguous. Immediate danger requires appropriate local emergency assistance.

### What support can look like

Respect privacy; ask what help is actually useful; avoid demanding sensitive investigative records as proof of personal honesty. Continued emotional support can coexist with healthy scepticism about online appearances and with reasonable questions about wellbeing.

Specialist stalking guidance encourages personalised safety planning, evidence preservation and support for the affected person. Research also documents the psychological and relationship impacts of cyberstalking. This memorandum should support steady communication, not create additional scrutiny.

### Reader's closing understanding

**A carefully constructed online impression may be compelling even when it is incomplete. For this reason, loved ones are asked to distinguish what was posted from what actually occurred, to avoid guessing at the identities of third parties, and to discuss concerns through trusted private channels.**
